Technical Appendix A: Methodology

The findings of this study, conducted in 2017-18, draw on data from a set of three surveys: pre- and post-trip surveys of summer 2017 Taglit participants from Russia, Ukraine, Belarus, and Germany and a long-term follow-up survey of 2010-14 Taglit participants from Russia and Ukraine. A series of interviews with FSU-based Taglit recruiters and professionals working with Jewish young adults, focus groups with past participants living in Russia and Ukraine, and a participant observation of a summer 2017 trip of Russian participants helped inform the survey instruments and analyses.

The surveys were conducted as a “failed census,” meaning that attempts were made to contact all known members of the population, rather than just a random sample. Participants from Russia and Belarus were sent the survey in Russian, while participants from Ukraine had the option to take the survey in either Russian or Ukrainian. Participants from Germany were sent the survey in German. The study was comprised of three surveys described below.

Pre-trip Survey
The pre-trip survey was conducted shortly prior to the trips via an online questionnaire. A total of 1,631 applicants from Russia, 733 applicants from Ukraine, 355 applicants from Belarus and 385 from Germany were invited to take the survey. Because trip dates spanned the whole summer, email invitations and reminders were sent on staggered dates accordingly. Invitations were sent 3 weeks prior to the trip departure, and reminders were sent in one week intervals up to a few days prior to the trip. Up to 3 email communications were sent. Participants who were assigned travel dates less than three weeks prior to the trip, received fewer communications regarding the survey.

Respondents from each country were offered a chance to win one of two gift cards. In Russia the gift cards offered were from ozon.ru worth 3,000 rubles, in Ukraine gift cards were from comfy.ua worth 1,000 hryvnia, in Belarus gift cards were from 21vek.by worth 100 rubles, and in Germany gift cards were from Amazon.de worth 50 EURO.

All individuals who did not respond to the survey 2 days after the first reminder received follow-up phone calls in Russian. In Germany phone calls were made in German. The study utilized experienced callers who received special training on interacting with respondents and using the CMJS survey management system. All individuals were called once and encouraged to complete the survey. Callers left voice messages if they could not reach individuals directly. Following the phone call, all individuals were sent an email with a link to the survey. Calling operations for the pre-trip survey took place between June 22 and August 16, 2017.
A total of 1,236 participants from Russia, 523 from Ukraine, 240 from Belarus, and 195 from Germany completed the survey (complete and partial response) for a response rate (AAPOR RR2) of 78% in FSU countries and 53% in Germany. Table A1 presents final dispositions and AAPOR response rates for summer 2017 participants in total and by country.

Post-trip Survey

The post-trip survey was conducted 6 to 9 months after the trip via an online questionnaire. A total of 1,677 individuals from Russia, 733 individuals from Ukraine, 355 individuals from Belarus, and 307 individuals from Germany were invited to take the survey. Email invitations to the FSU samples were sent on March 15, 2018, and reminder emails were sent on March 20, March 26, April 12, and May 10. In Germany email invitations were sent on April 19, with reminders on April 24, April 30, and May 14. All participants were invited to participate in the survey. In the FSU countries, respondents from each country were offered a chance to win a gift card worth $50 to one of the following outlets ozon.ru, Giftmall.ua, 21vek.by or Amazon.com. Respondents were informed that the chance of winning was one in twenty. In Germany, respondents were offered a 5 EURO Amazon.de gift card upon completion of the survey.

All participants who did not respond to the survey after the first reminder received follow-up phone calls in Russian that encouraged survey completion. In Germany phone calls were conducted in German. The study utilized experienced callers who received special training on interacting with respondents and using the CMJS survey management system. All individuals were called once and were encouraged by callers to complete the survey. Callers left voice messages if they could not reach individuals directly. All individuals were sent an email with a link to the survey following the phone call. In the FSU calling operations took place between March 28 and May 18, 2018. In Germany calling operations took place in early May 2018. Individuals from the FSU that could not be reached by email or phone were searched on social media platforms – Facebook and VKontakte. If found, individuals were contact via private messaging to verify their identity and participation in Taglit. All successful contacts were followed up by email communication. A total of 960 participants from Russia, 398 from Ukraine, 182 from Belarus, and 146 from Germany completed
the survey (complete and partial response). Final dispositions and AAPOR response rate for the post-trip survey are detailed in Table A2.

Long-term Survey

Pilot study. To test survey operation, the appropriate incentive structure and to understand the likelihood of response from each country a small pilot survey was sent to 60 participants from Russia and 60 participants from Ukraine. Half of the sample was offered a one in ten chance to win a $50 value gift card and the other half were offered a guaranteed gift card with a $10 value upon completion of the survey. 25 participants from Russia and 22 participants from Ukraine responded to the survey. The pilot study revealed that reaching respondents from Ukraine will be significantly more challenging and will require more effort than reaching participants from Russia. In addition, the pilot study indicated that a lottery incentive of a higher monetary value gift card was more attractive than the guaranteed lower value gift card. The responses of pilot study participants were not included in the analysis.

Participant survey. All participants from Russia and Ukraine who went on a Taglit trip between 2010 and 2014 were included in this study and surveyed via an online questionnaire. A total of 5,088 participants from Ukraine and 8,165 participants from Russia were invited to participate in the survey. Participants from each country were divided into 2 groups: The first group “the calling sample” comprised a random sample of participants that received follow-up phone calls in addition to email communications. The remainder of participants only received email communications. Table A3 presents the number of participants in each sample by country.

Email invitations to the “calling sample” were sent on January 17, 2018 and email invitations to the rest of the sample were sent on January 18, 2018. Reminder emails were sent on January 23, January 30, February 6, February 15, February 22, March 7, and March 14. Respondents from each country were offered a one in ten chance to win a gift card worth $50 from the following outlets: ozon.ru, Giftmall.ua, and Amazon.com.

All participants in the calling samples who did not respond to the survey after the first reminder received follow-up phone calls in Russian that encouraged survey completion. The study utilized experienced callers who received special training on interacting with respondents and using the CMJS survey management system. All individuals were called once and were encouraged by callers to complete the survey. Callers left voice messages if they could not reach individuals directly. All individuals were sent an email with a link to the survey following the phone call. Calling operations took place between January 23 and March 1, 2018. From February 21 to March 21, respondents were also searched on social media sites Facebook and VKontakte. They were contacted via direct message, asked to confirm their status as a Birthright participant and confirm or provide an updated email address, after which they were sent an invitation to the survey via email to the confirmed or new email address.

A total of 1,909 participants from Russia and 1,009 from Ukraine completed the survey for a response rate (AAPOR RR2) of 22%.

Non-participant survey. The original design of the study called for a comparison of 2010-2014 participants and applicants who were deemed eligible for the program but did not participate for various reasons. Although the number of non-participants was small, CMJS made an attempt to survey them. A total of 259 nonparticipants from Ukraine and 466 nonparticipants from Russia were invited to participate in the survey. Only a small number of individuals responded to the invitation. After the first email reminder to this group was sent, the responses of nonparticipants were
examined. The preliminary examination revealed that a significant number of individuals who were considered nonparticipants, did in fact go to Israel on Taglit. Some went during the study time period and some went later on. It was determined that follow-up efforts for this group would not yield a large enough achieved sample to allow for a meaningful analysis and follow-up efforts for this group were abandoned. A total of 94 individuals from this group completed the survey. Of these 75 were participants between 2010 and 2014. These individual’s responses were added to the responses of other participants and included in the analysis.

Weighting

**2017 cohort pre- and post-trip survey weights.** Because both surveys were sent to all members of the population, and all members of the population were included in follow-up calling if they had not completed the survey prior to the start of calling operation, no design weights were needed to account for unequal probabilities of selection.

Due to unit nonresponse, there were a number of significant differences between the characteristics of survey respondents and the characteristics of the full population. This could be determined empirically because a significant amount of demographic data is available in Birthright’s registration system for the entire population, including survey nonrespondents. The non-response analysis revealed that participants who responded to the surveys and participants who did not were very similar on a variety of demographic and Jewish background measures, with the exception of the following small differences: In the pre- and post-trip surveys respondents were more likely to be female (53.2% in the pre-trip, 52.4% in the post-trip compared to 50.3% of all participants) and less likely to have parents that were both Jewish (8.3% in the pre-trip, 8.2% in the post-trip compared to 11.2% of all participants).

Three sets of weights were calculated, for respondents to the pre-trip survey, respondents to the post-trip survey, and those who responded to both the pre- and the post-trip survey. In each case the weights were calculated so that the demographic characteristics of respondents to the pre-trip survey, the post trip survey or both surveys, matched those of the full population. This weighting procedure (often known as “raking”) iteratively adjusts on each specified variable in turn, until the difference between the weighted estimate and target value for each variable is below a minimum specified level. Weights for this study were computed in Stata using the user written “survwgt” command.

**2010-2014 cohort long-term survey weights.** For the 2010-2014 cohort, the survey population was divided into calling and non-calling strata. Because the individuals who were called were a random sample of the population, no weights were needed to account for these individuals’ higher probability of selection.

Due to unit nonresponse, there were a number of statistically significant differences between the characteristics of survey respondents and the characteristics of the full population of participants in
the 2010-2014 cohort. In the long-term survey, respondents were more likely to be from Russia (65.4% compared to 61.6% of all participants), more likely to be female (58.9% compared to 56.4% of all participants), and more likely to be from the 2013-2014 cohorts (50.5% compared to 43.5% of all participants). Weights were calculated to adjust for this nonresponse bias. Weights calculation began with the design weights calculated to account for the stratification into calling and non-calling strata, and weights for respondents in question were then adjusted so that the demographic characteristics of respondents to the long-term survey, matched those of the full population. This weighting procedure (often known as “raking”) iteratively adjusts on each specified variable in turn, until the difference between the weighted estimate and target value for each variable is below a minimum specified level. Weights for this study were computed in Stata using the user written “survwgt” command.

In addition to weights adjusting for non-response bias, a separate set of weights was calculated to allow the comparison of the 2010-2014 cohort to the 2017 cohort. There were some systematic differences between these two groups: 2010-2014 participants were less likely to be from Russia (65.4% compared to 69.6% of 2017 participants), more likely to be female (58.9% compared to 51% of 2017 participants), more likely to have visited Israel before applying to Taglit (20.6% compared to 26.7% of 2017 participants), less likely to have a family member who was a member of a Jewish organization prior to applying to Taglit (29.4% compared to 22.7% of 2017 participants), more likely to have at least one Jewish parent (73.2% compared to 67.3% of 2017 participants), and more likely to be older during the trip (33% were 18-20 years old compared to 42% of 2017 participants). These comparison weights corrected for these differences by adjusting respondents from the 2010-2014 cohorts to demographic targets from the 2017 cohort, and were applied as appropriate in the various sections of the report as described below.

Analysis

Analyses were conducted using Stata 15.1 and the “svy” suite of commands for weighted data. Data were variously drawn from the Birthright registration system, the pre-trip survey, and the post-trip survey, and appropriate weights were applied to each analysis based on the source or sources of the data.

In sections describing participants’ demographic characteristics and Jewish backgrounds, we present weighted proportions usually in the format of two-way tables of frequencies. Chi-square tests were performed to assess the differences between the 2017 and 2010-2014 participants and when appropriate, the differences between participants from each country. The results of these tests are noted in notation to tables and figures and reported in details in Technical Appendix B.

In sections describing the trip experience and trip impact, we present weighted proportions for the 2017 survey and weighted proportions using the “comparison weights” for the 2010-2014 long-term survey.
Measuring Taglit’s Impact

The following comparisons form the basis for the examination of Taglit’s impact on the participants:

A comparison of the 2017 participants’ attitudes and behaviors as reported before the trip to their individual responses after the trip. To measure the differences between pre-trip and post-trip survey measures, statistical models ran on a “reshaped” version of the dataset, where pre- and post-trip observations were “nested” within individuals. If participants’ attitudes and behaviors post-trip changed from those reported before the trip a determination of Taglit’s short-term impact was made. The models are included in Technical Appendix C.

A comparison of the 2010-14 participants’ attitudes and behaviors reported in the long-term survey to those of 2017 participants reported in the post-trip survey, with controls for any differences between the two groups. The relative difference between 2010-14 and 2017 participants’ pre- and post-trip responses were measured with respect to a particular outcome using a chi sq significance test on data weighted with the comparison weights. If participants’ attitudes and behaviors in the long-term showed an improvement from those reported on the 2017 pre-trip survey, after adjusting for demographic differences in the participant pool between these two cohort groups, a determination of Taglit’s long-term impact was made.

Two theoretical challenges to the study’s conclusions about Taglit’s impact are addressed below:

1. One possible argument is that external forces other than the Taglit experience caused the entire population (including Jewish young adults who did not go on a Taglit trip) to change during the period under investigation. With respect to the 2017 cohort, there were no obvious dramatic political or economic events occurring during that time that would have increased or decreased participants’ positive attitudes toward Israel. There were also no known changes in the local Jewish communities studied that might have affected the entire population in terms of their relationship to their local Jewish community or to the Jewish people more broadly. Thus, the risk for overestimating Taglit’s impact on the 2017 cohort is relatively low.

2. Another possible contention is that the 2010-14 cohort started out more connected to Israel and to Jewish life than did the 2017 cohort in ways that statistical controls cannot correct. If true, there would be an overestimation of the long-term impact of Taglit. The statistical controls in this study, however, cover a wide swath of engagement with Jewish life; and therefore, the risk for overestimating Taglit’s impact on the 2010-14 cohort appears to be relatively low.

BRI 36 Pre-Trip 2017 FSU

Thank you for participating in the study of young adults who applied to go on Taglit this coming summer. In the survey, we will ask you about your views, your interest in the program, and about your upbringing and current activities. You were specifically selected to participate in this study and your responses are very valuable.

The survey will take about **15 minutes** to complete. **Please note: this survey is NOT optimized for mobile devices.**

Participation in this survey allows you to take part in the **raffle of a gift card** from {if(TOKEN:ATTRIBUTE_1==1, 'ozon.ru', if(TOKEN:ATTRIBUTE_1==2, 'comfy.ua', if(TOKEN:ATTRIBUTE_1==3, '21vek.by', ''))}) in the amount of {if(TOKEN:ATTRIBUTE_1==1, '3000 rubles (RUB)', if(TOKEN:ATTRIBUTE_1==2, '1000 hryvnia (UAH)', if(TOKEN:ATTRIBUTE_1==3, '100 rubles (BYR)', ''))}).

This survey is conducted by the Cohen Center for Modern Jewish Studies at Brandeis University. **Your individual responses will be kept strictly confidential** and only aggregate data will be reported. No one outside the research team will have access to the data. Your participation in the survey is entirely voluntary. If you wish, you may decline to answer specific questions, and you may conclude the survey at any point.

If you have any questions or concerns regarding the survey, please contact us at taglit@brandeis.edu or call Breanna Vizlakh at 781-736-3944. You may also contact the Brandeis Committee of Experts that works to safeguard the interests of individuals who participate in Brandeis-sponsored research (781-736-8133, irb@brandeis.edu).

To start the survey click on the "Next" button below.

There are 113 questions in this survey

Taglit Apply

**Your input is important to us!**

**Your individual responses to this study will NOT be shared with Taglit and will not influence the possibility of your participation.**

We'll start by asking you a few questions about your application to Taglit for summer 2017.

---

**Was this your first time applying to Taglit?**

Please choose only one of the following:

- No
- Yes
From whom did you first hear about Taglit?

Please choose only one of the following:

- Family or friends
- Past Taglit participant
- Representative of a Jewish organization (e.g., Sochnut, Moishe House, ICC)
- Social media ad (Facebook, VKontakte)
- Other. Please specify: [ ]

What is the MAIN reason you did not apply to Taglit before?

Only answer this question if the following conditions are met:
first.NAOK == "1"

Please choose only one of the following:

- I never heard about Taglit trips
- I wasn't 18 years old yet
- I didn't think I was eligible for the trip
- I had conflicting work/school obligations
- I had conflicting personal/family obligations
- I couldn't afford other trip expenses and/or the deposit
- I was concerned the trip was politically one-sided
- I was concerned that it would be too religious
- I was concerned about safety
- I wanted to be older when I went
- I didn't really want to go
- Other. Please describe: [ ]

How important were the following when selecting a trip on your Taglit application?

Please choose the appropriate response for each item:

<table>
<thead>
<tr>
<th>Going with a specific trip organizer (e.g., JAFI, Hillel)</th>
<th>Not at all</th>
<th>A little</th>
<th>Somewhat</th>
<th>Very much</th>
</tr>

BRI 36 Pre-Trip 2017 Germany

Thank you for participating in the study of young adults who applied to go on Taglit this coming summer. In the survey we will ask you about your views, your interest in the program, and about your upbringing and current activities. You were specifically selected to participate in this study and your responses are very valuable.

The survey will take about 15 minutes to complete. Please note: this survey is NOT optimized for mobile devices. To thank you for your time, when you are done you will be entered in a lottery to win one of two 50 EURO Amazon.de gift cards.

This survey is conducted by the Cohen Center for Modern Jewish Studies at Brandeis University in the United States. Your personal responses will only be available to the research team and will be kept strictly confidential. Responses will only be reported in the aggregate. Your participation in the survey is entirely voluntary. If you wish, you may decline to answer specific questions, and you may conclude the survey at any point.

If you have any questions or concerns regarding the survey, please contact us at isrlstudy@brandeis.edu or call Breanna Vizlakh at 781-736-3944. You may also contact the Brandeis Committee for the Protection of Human Subjects (781-736-8133, irb@brandeis.edu). This committee works to safeguard the interests of individuals who participate in Brandeis-sponsored research.

BRI Germany Post-Trip 2018

Thank you for participating in the study of young adults who participated in Taglit this past summer. In the survey we will ask you about your views, your experience on the program, and about your {if(TOKEN:ATTRIBUTE_2==0, 'upbringing and current activities', 'current activities')}. Your responses are very important to us! They ensure that the results of the study represent the diversity of experiences on the trip.

The survey will take about 15 minutes to complete. To thank you for your time, when you are done you will receive a 5 EURO Amazon.de gift card.

This survey is conducted by the Cohen Center for Modern Jewish Studies at Brandeis University in the United States. Your personal responses will only be available to the research team and will be kept strictly confidential. Responses will only be reported in the aggregate. Your participation in the survey is entirely voluntary. If you wish, you may decline to answer specific questions, and you may conclude the survey at any point.

If you have any questions or concerns regarding the survey, please contact us at isrlstudy@brandeis.edu (mailto:isrlstudy@brandeis.edu) or call Naomi Weinblatt at 00-1-781-736-3821. You may also contact the Brandeis Committee for the Protection of Human Subjects (00-1-781-736-8133, irb@brandeis.edu (mailto:irb@brandeis.edu)). This committee works to safeguard the interests of individuals who participate in Brandeis-sponsored research.
