Technical Appendix A: Methodology

This document provides detailed methodological information about the study described in Beyond Welcoming: Engaging Intermarried Couples in Jewish Life. This study focuses on two types of couples – those in which one member of the couple is Jewish and the other is not, and those in which both members of the couple are Jewish.

Sampling Frame
The population of this study is comprised of couples recruited from respondents to two CMJS studies of individuals who applied to Birthright Israel:

1. The Jewish Futures Project (JFP) panel. The JFP – an ongoing longitudinal study – has a panel comprised of a random stratified sample of individuals who applied to Birthright Israel in the period of 2001-09. The panel includes both those who went on the trip and those who applied but did not end up going. In the fifth wave of data collection in 2015-16 the panel included 2,721 respondents (see Technical Appendix A in Saxe, Shain, Wright, Hecht, & Sasson, 2017 for additional details about the panel).

2. The Millennial Children of Intermarriage study respondents. This study included a sample of individuals who applied to Birthright Israel between summer 2009 and winter 2013-14, including both those who went on the trip and those who did not. The study, conducted in 2015, had 2,573 respondents (See Technical Appendix A in Sasson et al., 2015 for more details about this study).

Individuals from these two studies were targeted for recruitment if they met the following criteria, according to their responses to the studies above:

1. Were married, engaged, or living with a significant other at the time of last data collection.
2. Currently identified as Jewish (including those who identified as Jewish aside from religion or who identified as Jewish and another religion).
3. Reported that they were raised in any Jewish denomination but Orthodox (i.e., those raised Orthodox were excluded).

The frame details are described in Table A1.

Recruiting Procedure
Email invitations to sign up for participation in the current study were sent to the last known email address of those included in the frame (N=2,118). Invitations included a unique link to a short sign-up survey (hereafter referred to as “the screener”). In the screener, respondents were asked about their marital and relationship status, the religion of their significant other/spouse, and the number of children in the household. Respondents were also explicitly asked to opt in their couple unit to
participate in the study and to provide contact information both for themselves and for their significant other/spouse. In the email invitation and in the screener, respondents were informed that upon completion of the main survey by both members of the couple, each would receive a $25 Amazon.com gift card ($50 per couple).

Invitations to complete the screener were sent on March 20, 2017. Follow-up reminders were sent on March 27, 2017 and March 31, 2017. Phone calls were placed to non-respondents during April 2017. Callers encouraged individuals to complete the screener online, or completed the screener with respondents over the phone. A final reminder to complete the screener was sent on April 28, 2017.

Individuals who indicated that they were no longer married, engaged, cohabiting, or part of a couple unit were deemed ineligible for the study.

The results of the recruiting efforts are summarized in Table A2.

In these appendices the individual who was part of the two original studies is designated as the “hub” and the hub’s significant other/spouse is designated as the “spoke.”

**Main Survey Administration**

Email invitations to participate in the main survey were sent out in three batches on April 28, 2017, May 1, 2017, and May 10, 2017. Hubs and spokes each received a separate email with a unique link to their own survey. If only one member of the couple completed the survey, 24 hours later, the survey administration system sent an automated reminder encouraging the other member to complete their own survey. The individual who completed the survey also received a notification encouraging them to remind their significant other/spouse to complete the survey. Once both members of the couple completed the survey each member received a $25 Amazon.com gift card (a total of $50 per couple).

Couples in which neither member of the couple completed the survey received up to three email reminders. In cases where one member of the couple responded and the other did not, CMJS-
trained callers placed follow-up calls to the nonresponding member. Callers encouraged survey participation and sent an email with the link to the survey but did not conduct phone interviews. Only couples for which both members of the couple responded to the survey were included in analyses discussed in this report.

The survey was closed on June 27, 2017.

The final response rate for the survey (AAPOR RR3) was 88% (Table A3). A small number of respondents (N=4) indicated in the main survey that they were no longer in a committed relationship and were considered ineligible.

Although respondents who previously indicated that they were raised Orthodox were not recruited to the study, a small number (N=6) of respondents to the survey indicated that they were raised Orthodox when asked in this study, contradicting their previous answers. In addition, in 41 of the couples the “spoke” was raised Orthodox. These individuals were included in the analyses presented in this report.

Technical Appendix B: Classification of Couples

The analysis paradigm of this study compares couples in which both members of the couple are Jewish ("Jewish+Jewish couples") to couples in which only one is Jewish and the other is not ("Jewish+Non-Jewish couples"). For the sake of brevity, in these appendices Jewish+Jewish couples are designated as “J-J” couples and Jewish+Non-Jewish couples are designated “J-O” couples. Couples were classified in two steps. First the individual religion and Jewish self-identification of each member of the couple was determined. Second, the religion and Jewish self-identification of both members of the couple were considered together to form the J-J and J-O typology.

Determining individual religion and Jewish self-identification

Individual respondents were first classified into one of the following five groups described in Table B1

* Parents are considered Jewish if they are Jewish by religion (by birth or formal conversion only), Jewish aside from religion, or Jewish and something else. Also includes cases where four grandparents are Jewish but one or two parents are “JewBu” (Jewish and Buddhist).

Note that all individuals who were raised Jewish, or raised by Jewish parents are classified as “Jewish” regardless of their current religious identification. This decision was made in order to
ensure that the small number of individuals (N=5) who were raised Jewish but then stopped identifying as Jewish after marrying a non-Jewish spouse were considered part of a “Jewish+Other” relationship, and not excluded from the analysis.

**Determining couple religious type**

After each individual was classified into one of the five categories, couples were classified into two types described in Table B2

1 These four converts to Judaism married non-Jews after their conversions to Judaism.

2 Of these 10 non-Jews in process of conversion to Judaism, three are engaged and seven are already married.
Technical Appendix C: Analysis Paradigm

Since it was drawn from two idiosyncratic subsamples of Birthright applicants who were raised non-orthodox, the sample utilized in this report is not representative of any particular population. The focus of this report is on understanding the relationship between partner choice, Jewish background, and current Jewish attitudes and behaviors, rather than estimating the prevalence of any particular behavior in a population. As such no weights were calculated for this report and all analyses are reported unweighted.

This report includes analyses at both the “couple level” and the “individual level.” That is, some analyses treat the unit of analysis as the couple, and some treat the unit of analysis as individuals, who are nested within couples.

Individual-level Analysis

At the individual level, all respondents were divided into four categories, based on their own Jewish status, their partner’s status, and whether or not they were a “hub” or “spoke” – i.e., part of the original sample or not. Thus, for respondents in Jewish+Jewish relationships, separate categories were designated for the hub and spoke respondents. Because – by definition – all members of the original sample were Jewish, the Jewish member of a Jewish+Non-Jewish couple was always a hub and the “other” member was always a spoke.

Table C1: Final individual classification

</tr>
<tr>
<td>4</td>
<td>Other respondent in Jewish+Non-Jewish relationship (“spoke”)</td>
</tr>
<tr>
<td>Total</td>
<td>2,256 (100%)</td>
</tr>
</tbody>
</table>

As mentioned in the report, the characteristics of the Jewish “spokes” were – in most cases – similar to their Jewish “hub” partners, although there were a few situations where they did differ significantly with respect to Jewish background. In the report – for ease of presentation – we omit data from Jewish spokes (category 2 above) from all analyses, reporting only data from Jewish hubs. However, in the section “Differences and Similarities between Partners in Jewish+Jewish Couples” we do note places where hubs and spokes significantly differ in terms of Jewish background.

Analyses presented in the report were conducted as cross tabs using a modified version of the above variable (which omits cases in category 2) and the outcome variable in question. Significance levels
were estimated using chi-square tests. In cases where a third variable (such as childhood Jewish experiences) was included in the analyses, multiple chi-square tests were calculated to determine the significance of each salient comparison discussed in the report. Differences discussed in the report were statistically significant at the 95% level unless otherwise noted. The complete results of all chi-square tests discussed in the report are presented in Technical Appendix D, below.

**Couple-level Analysis**

For couple level analyses couples were divided into two categories based on the criteria discussed in Technical Appendix B.

Analyses were conducted as cross tabs using this variable and the outcome variable in question. In cases where a third variable (such as childhood Jewish experiences) was included in the analyses, multiple chi-square tests were calculated to determine the significance of each salient comparison discussed in the report. Differences discussed in the report were statistically significant at the 95% level unless otherwise noted. The complete results of all chi-square tests discussed in the report are presented in Technical Appendix D, below.

In some cases multivariate statistical models (such as ordinal logit models) were used to confirm the bivariate relationships discussed in the report. The results of these models are available upon request.
Technical Appendix D: Statistical Significance Test Results

This appendix reports results of chi-square tests used to test the statistical significance of all differences discussed in the report. Briefly, a chi square test is used to assess the likelihood that the observed differences in a cross tabulation reporting data from a sample are merely due to random chance, as opposed to differences in the underlying population. In some cases multiple chi-square tests were needed to test differences between and within different groups. In addition, because chi-square tests only assess the significance of a table as a whole, additional chi-square tests were run to assess the statistical significance of differences between particular groups within a larger table. The tables below report the degrees of freedom of the table, the number of observations in the table, the chi-square value, and the p value.

Couples Study 2017

Dear {TOKEN:FIRSTNAME} {TOKEN:LASTNAME},

Welcome to the Couples Study!

The link you just clicked is intended for you only. If {TOKEN:ATTRIBUTE_1} should have gotten their own link to the survey. If you are not {TOKEN:FIRSTNAME} {TOKEN:LASTNAME}, please stop and contact the research team at study@brandeis.edu or 781-736-3821.

To continue, please click on the "Next" button below.

There are 449 questions in this survey

Intro 2

This study focuses on how couples make decisions about religion and cultural heritage in their homes. You will be asked about your background, your relationship with your partner, and the role that Judaism plays in your life.

Completing the survey will take about 15-20 minutes. To thank you for your time, when both you and {TOKEN:ATTRIBUTE_1} complete your surveys, you will each receive a $25 Amazon.com gift card!

This study is being conducted by the Cohen Center for Modern Jewish Studies at Brandeis University. Participation is voluntary and presents minimal risk to you. You may choose to exit the survey at any time, but we hope that you will answer the questions fully and honestly. Information from this survey will be kept secure and confidential, and will be reported in ways that do not identify individuals.

This study and its procedures were approved by the Brandeis Institutional Review Board. If you have questions about your rights as a research participant, you can contact the Brandeis Institutional Review Board at irb@brandeis.edu or (781) 736-8133.

If you have any questions or concerns regarding the survey, please contact us at study@brandeis.edu or call Naomi Weinblatt at (781) 736-3821.
